## ABOUT THE COMPANY

---

LINDØ port of ODENSE is the third largest port in Denmark of national and international importance and consists of the Port of Odense and Lindø Industrial Park.

LINDØ port of ODENSE disposes of 6.4 million square metres of industrial and harbour area distributed between the Terminal North at Lindø to the City Terminal in Odense.

## CORE COMPETENCES

---

Core competences include renting out buildings and areas, cranes and crews, loading/discharging of ships and heavy lifting and transport jobs of up to 1000 tons. We also offer wide areas at our North Terminal for various bulk activities handled by cranes up to 150 tons.

Our location between the North Sea and the Baltic Sea, in combination with large production halls, quays and docks, and a water depth of 7.5 – 11 metres enable us to offer unique production and storage facilities for large maritime, offshore and wind projects.

LINDØ port of ODENSE is in fact the only location in Northern Europe offering millions of square metres and lifting capacities of up to 1000 tons. This enables us to meet the demands from customers with projects of any size.
